

Normandy Aluminum Guitars

September 16, 2008 by SSS

In 2008, Normandy Guitars introduced the world's first production aluminum archtop guitar. The Normandy guitar was born from a rocker's love of classic guitars and the smooth, unique sound of aluminum streaming from the strings. In 2007, Jim Normandy started Normandy Guitars, the company that would make the world's first production aluminum archtop. After 15 prototypes, the Normandy guitar was created. These guitars are slick. For more information, visit their [website](#).

That guitar looks sweet! I have heard so much about how the wood a guitar is made from , is important to how it sounds. I have even read that the finish is important too, as far as on a hollow body guitar the thickness of the finish can affect the sound.

I wonder how aluminum affects the sound , or if you can hear a difference between aluminum or wood?

KJ
